

ASHBURTON MONEY MARKET FUND

Minimum Disclosure Document as at 30 June 2020

Investor profile

The fund is suitable for investors requiring a competitive interest rate, with regular income distributions, capital preservation and liquidity in the short term.

Investment objectives and strategy

The fund seeks to maximise interest income, preserve capital and provide immediate liquidity for investors. It will invest in a diversified portfolio of money market instruments. The maximum term of instruments included will be limited to 13 months and the weighted average duration will not exceed three months. The only risk from this fund is reinvestment risk if interest rates fall, inflation risk as well as credit risk.

Performance and statistics

Source: Morningstar®, Ashburton Investments

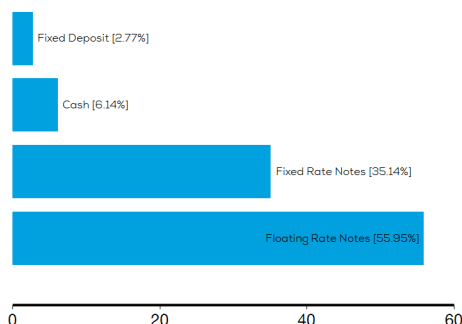

All performance numbers are net of all fees and expenses. The above is purely for illustrative purposes. The above portfolio performance is calculated on a NAV to NAV basis and does not take any initial fees into account. For reinvesting funds, income is reinvested on reinvestment date. Actual investment performance will differ based on the initial fees applicable, the actual investment date, the date of reinvestment of income and dividend withholding tax. Past performance is not necessarily an indication of future performance.

Definitions

Total return:	Total return accounts for two categories of return: income and capital appreciation. Income includes interest paid by fixed income investments, distributions or dividends. Capital appreciation represents the change in the market price of an asset.
NAV (net asset value):	This is the total value of assets in the portfolio less any liabilities, divided by the number of shares outstanding.
TER (total expense ratio):	This is a measure of the total costs associated with managing and operating an investment fund. These costs consist primarily of management fees and additional expenses such as trustee and custody fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets to arrive at a percentage, which represents the TER.
Index:	In the case of financial markets, an index is a theoretical portfolio of assets representing a particular market or a portion of it. Each index has its own calculation methodology and is usually expressed in terms of a change from a base value. Thus, the percentage change is more important than the actual numeric value.
Transaction costs:	Total costs incurred by the investor in buying and selling the underlying assets of a financial product and is expressed as a percentage of the daily NAV calculated on an annualised basis. These costs include brokerage, VAT, and trading costs.
Annualised cost:	Is the cost per year of investing in the assets of a financial product.
Annualised return:	This is the average rate earned by the investment over a year in the period measured.
Tracking error:	A measure of the amount of risk that is being taken in excess of the benchmark.

Disclaimer

Ashburton Management Company (RF) (Proprietary) Limited (Reg No 1996/002547/07) ("Ashburton") is an approved collective investment schemes manager of the Ashburton Collective Investment Scheme ("Ashburton CIS"). Ashburton is regulated by the Financial Services Board and is a full member of the Association for Savings and Investment SA (ASISA). This document and any other information supplied in connection with the Ashburton CIS is not "advice" as defined and/or contemplated in terms of the Financial Advisory and Intermediary Services Act, 37 of 2002 ("the FAIS Act") and investors are encouraged to obtain their own independent advice prior to buying participatory interests in CIS portfolios issued under the Ashburton CIS. Any investment is speculative and involves significant risks and therefore, prior to investing, investors should fully understand the portfolios and any risks associated with them. Collective investment schemes in securities are generally medium to long term investments. In the event a potential investor requires material risks disclosures for the foreign securities included in a portfolio, the manager will upon request provide such potential investor with a document outlining: potential constraints on liquidity & repatriation of funds; Macroeconomics risk; Political risk; Foreign Exchange risk; Tax risk; Settlement risk; and Potential limitations on the availability of market information. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to the future. Forward pricing is used and portfolio valuations take place at approximately 14h00 each business day. Instructions to redeem or repurchase must reach Ashburton before 11h00 to ensure same day value. The price of each participatory interest is aimed at a constant value. While a constant price is maintained the investment capital or the return of a portfolio is not guaranteed. The total return to the investor is primarily made up of interest received but may also include any gain or loss made on any particular instrument. In most cases this will merely have the effect of increasing or decreasing the daily yield, but in extreme case, e.g. defaults by underlying issuers, it can have the effect of reducing the capital value of the portfolio. The yield is calculated using an annualised seven day rolling average as at 30/06/2020. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressures. In such circumstances, a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. CIS portfolios are traded at ruling prices and can engage in borrowing and scrip lending. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. A CIS portfolio may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Participatory interests are calculated on a net asset value (NAV) basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the CIS portfolio divided by the number of participatory interests in issue. All fees quoted exclude VAT except where stated differently. The Total Expense Ratio (TER) is expressed as an annualised percentage of the charges, levies and fees incurred by the portfolio related to its management, for the period under review against the average NAV of the portfolio over this period. A higher TER does not necessarily imply a poor return, nor does a lower TER imply a good return. The current TER cannot be regarded as an indication of future TERs. A full detailed schedule of fees, charges and commissions is available from Ashburton on request and incentives may be paid and if so, would be included in the overall costs. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The manager has a right to close the portfolio to new investors in order to manage the portfolio more efficiently in accordance with its mandate. Additional information about this product, including brochures, application forms and annual or quarterly reports, can be obtained from the Manager, free of charge, and from the website: www.ashburtoninvestments.com. Ashburton Fund Managers (Pty) Ltd is an authorised Financial Services Provider. Bond and Income portfolios derives its income from interest bearing instruments and the yield is historic/current calculated as at 30/06/2020
